

How to Run TimeMaster II

The TimeMaster II works just like any calculator, but it calculates time! It is used to calculate Time Taken for Green Cards.

It's easy - just enter it the way you would say it!

1. Enter the END time exactly as it is on the Green Card followed by AM or PM and then Press the MINUS key
Ex: Enter 120233 PM (use the PM key) and the calculator automatically enters it as 12:02:33 PM. Then Press the MINUS key

You need to be in AUTO HR:MIN:SEC Mode. Press the MODE Key until your display says AUTO HR:Min:Sec like this example.

2. Next enter the START time exactly as it is on the card followed by AM or PM.
Ex: Enter 111500 and the AM key. The calculator automatically enters it as 11:15:00 AM.

3. Press the EQUAL key and the Time Taken will appear
Ex: 0:47:33 (47 minutes and 33 seconds) would appear for the example given.

- If Start and End Times are both AM or both PM you do not have to use the AM/PM keys.
- If you get into the wrong mode, press MODE until you get back to AUTO HR:Min:Sec
- Wet calculators don't work. Keep your calculator DRY!
